

PSC CASE No 9503

PPCA proceeding for Choptank Electric was conducted on June 11, 2009, and went through normally. The PPCA amount for January thru June 2009 was noted in the calculations as \$0.0, as a consequence of the company conducting 9040 and getting authority to roll the PPCA deficiency into the rate base.

The Board of Directors wanted the company to have as close to a zero balance at the end of the period of review for the next review interval after this and voted on June 2 to collect a PPCA of \$0.0011/kwh. That is a reduction in the amount noted from the previous period of \$0.0193/kwh.

There was also an agreement to have the company note in the 9503 case file any changes to its SOS rates which otherwise have to be found in tariff filings or as changes in a rate case.
