

CASE No. 9085 and CASE 9035 – Mirant Energy, CPCN

Application by Mirant Energy to modify the original CPCN granted in Case No.9031, November 2006, to build a coal unloading pier at their Morgantown generating facility. Homeowner's association was opposed to this change, which was anticipated to be a large expansion of the originally approved plan, and was argued to be a source of increased environmental degradation for the surrounding community. OPC appeared at the first public hearing on January 29, 2007 and objected to hearing based on a lack of proper notification to the public. In February and March 2007 OPC provided background procedural process information to the attorney retained by the association for purposes of filings in this proceeding.
